

GreenLyfe360

A better way to grow

Technology Features

GreenLyfe360 is a SaaS solution built for improved management across all aspects of your cultivation business including compliance, track and trace tasks, and plant growth optimization. Below are key software features that focus on helping your team move as efficiently and effectively as possible.

Bidirectional Metrc Syncing

Fully integrated with Metrc, GreenLyfe360 allows you to easily sync to and from each platform. Pull your data into our system within minutes and get alerts when data between the systems needs reconciliation.

Mobile App

Available for both iOS and Android, our mobile application was built to facilitate your everyday tasks with its hardware integrations and full Metrc capabilities. Have access to control your business everywhere you go.

RFID & Barcode Scanning

Connect to RFID readers and scan labels to initiate bulk actions. With a stable integration with the Zebra RFD8500 and MC3300R devices, you can scan your locations in a matter of seconds, saving your team hours of time each day.

Location Audits

Audit your locations in minutes by scanning your plants and packages and using our compare tools. Quickly locate any lost labels and fix discrepancies that would otherwise cause alerts when it's time for an audit.

Bluetooth Scale Integration

Use a Bluetooth scale to quickly and consecutively weigh your items, whether you're splitting a package, removing waste, or harvesting plants. Rely on a seamless experience that eliminates errors caused by manual data entry.

Plant Growth Optimization

With all your data in one place, you can analyze environmental conditions and nutrients that worked best for each specific strain. Evaluate the actual and ideal VPD for your locations and make adjustments that optimize your output.

Customer Store

Quickly add your customers using our CRM state specific database. Create personal logins allowing customers to enter preorders for fast and easy processing. Manage your inventory for each facility with real-time calculations.

Labels

Connect to an integrated printer and manage your inventory with labels. Print barcodes, packaging details and other labels for your business. Easily bundle items by generating a unique QR code for bulk item scanning later.
